PROFESSIONAL SUMMARY

Full Stack Software Engineer currently driving system modernization at Atena using .NET 8 and Angular 19. Specialized in refactoring legacy architectures into high-performance, reactive solutions leveraging Signals and optimized RESTful APIs. Bridges the gap between enterprise software engineering and academic research in Deep Learning (LSTM Financial Forecasting). Committed to Clean Architecture standards and asymptotic optimization in production environments.

EDUCATION

Universidad Nacional de Piura

Systems Engineering (Focus: Software Engineering & Artificial Intelligence)

Piura, Peru

2021 – Present

Alura Latam

Data Science Specialization (Scholarship)

Remote

Aug 2025

HarvardX

CS50's Web Programming with Python and JavaScript

Remote

Feb 2025

TECHNICAL SKILLS

Core Backend: C# (.NET 8/9), ASP.NET Core, Entity Framework Core, LINQ, RESTful APIs

Core Frontend: Angular 19 (Signals), TypeScript 5.0+, Tailwind CSS, RxJS

Data & AI: SQL Server (T-SQL), Python (Pandas, TensorFlow/Keras), PostgreSQL

Infrastructure & Tools: Docker, Git/GitHub Actions, Postman, Oracle Cloud Infrastructure

Concepts: Clean Architecture, SOLID, Dependency Injection, Design Patterns (Repository, Singleton), Agile/Scrum

Languages: Spanish (Native), English (Advanced/C1)

CERTIFICATIONS

Oracle Cloud Infrastructure (OCI) Foundations Associate

GitHub Foundations Certification

EXPERIENCE

Atena

Software Engineer - Full Stack

Lima, Peru (Hybrid)

Jan 2026 – Present

- Spearheaded frontend migration to Angular 19, replacing complex RxJS chains with Signals, reducing unnecessary component re-renders by approx. 35 %.
- Optimized C# (.NET 8) Web APIs and Entity Framework Core queries using projections and AsNoTracking, reducing average endpoint latency from 800ms to <200ms.
- Designed end-to-end features connecting SQL Server stored procedures with reactive frontend components, ensuring strict type safety via TypeScript.
- Introduced Unit Testing standards for business logic services, increasing code coverage and reducing regression bugs during the CI/CD process.

Freelance Software Developer

Full Stack Developer

Remote

Aug 2024 – Dec 2025

- Delivered custom web solutions for SMEs using the MERN Stack and .NET, managing the full SDLC from requirements gathering to Docker deployment.
- Developed a landing page with optimized SEO and Core Web Vitals, resulting in a 15 % increase in organic client retention.

Chirasoft <i>Junior Software Developer</i>	Piura, Peru (Hybrid) <i>Mar 2025 – Jun 2025</i>
- Contributed to the frontend migration of an institutional portal from WordPress to Angular 19, significantly improving load times and SEO performance. - Developed and maintained the product module for an e-commerce platform using Java Spring Boot and Angular, ensuring seamless full-stack integration. - Designed and prototyped high-fidelity UI/UX mockups in Figma for both the institutional migration and the e-commerce platform, enhancing user interface consistency.	

Municipalidad Provincial de Piura <i>IT Support & Developer Intern</i>	Piura, Peru <i>Jun 2024 – Dec 2024</i>
- Provided comprehensive technical support, including hardware installation, configuration, and maintenance of printers and user workstations across the institution. - Managed network infrastructure tasks such as VLAN configuration, subnetting, and internet protocol setups to ensure stable connectivity. - Performed data backups and user information recovery, while also reviewing legacy systems (FoxPro) for migration to modern web architectures (React/MySQL).	

PROJECTS & RESEARCH

LSTM Financial Time Series Forecasting <i>Python, TensorFlow, Keras, Pandas</i>	2026
- Designed and trained a Long Short-Term Memory (LSTM) neural network to predict stock trends in the Peruvian stock market (BVL), overcoming the Vanishing Gradient Problem. - Implemented robust data preprocessing pipelines including normalization and sliding window algorithms to optimize model convergence.	
FluentReads <i>Astro, React, TypeScript, Static Site Generation (SSG)</i>	2026
- Architected a high-performance e-commerce catalog using Astro and React, optimizing SEO and Core Web Vitals through static site generation. - Implemented dynamic product filtering, routing, and a client-side shopping cart system using TypeScript and React components.	
MAD AI - Enterprise User Management <i>Angular 19, Clean Architecture, TypeScript</i>	2025
- Architected a scalable SPA using Clean Architecture, strictly decoupling Domain, Infrastructure, and Presentation layers. - Implemented Repository Pattern, Facades, and Use Cases to isolate business logic and abstract state management. - Engineered a granular RBAC system with custom Guards and Interceptors to secure routes and API requests.
